About Netwin

Netwin Systems & Software (I) Pvt. Ltd. is specialized in innovative IT solutions and complex software applications development. Netwin focuses on delivering customized solutions to its clients by converting business ideas into well defined solutions. Netwin combines research & development activity with practical application in programming, web development & integration, multimedia development, custom IT systems design, testing and consulting.

Founded in 1993, Netwin Group has made a lasting impression as a ubiquitous and high quality provider of technology services. Having accumulated extensive experience by effectively serving various clients in India, US , Europe and Australia in meeting their outsourcing needs, we are now partnering over 200+ clients globally. Our clientele ranges from Multinational Corporations to small & medium enterprises.

Putting forth an enduring vision for meaningful offshore software development, we have worked with clients across a varied spectrum including key industries of Insurance, Finance, Banking, Hospitality, Travel services, Healthcare, Retail, Distribution and Manufacturing as well as Government and Public sector organizations.

Our range of offshore services includes software and web applications development and maintenance; collaborative and CRM applications using Microsoft Dynamics, SharePoint and Azure architectures; dedicated resources hiring and consulting team using ODC model.

Netwin has full-fledged offshore software development centers at Pune and Nashik in India which have capacity of 200+ resources. We have a strong team of over 130 analysts, developers and testing engineers. In addition to this we are setting up a new development facility to accommodate more than 500 skilled engineers to cater to the increasing needs of our clients.

Methodology

Our matured software development methodology assures the timely delivery of quality software solutions for your business. It includes time-tested processes and tools for each of our services and for risk mitigation and cost optimization. It is based on our extensive experience in successfully developing and implementing solutions for our customers in the US, Europe and Australia.

As the diagram displays, Netwin methodology is based on a foundation of innovation, followed by five components that ensure success in delivering the solutions you need and in building a long-term strategic outsourcing relationship.

Business analysis and strategic planning

In initial stage of the relationship, we engage in strategic conversations to address clients' technology needs and business requirements. We develop a strategic road map with a clear plan to achieve market parity and ensure the solution aligns to our client's objectives. We also develop an implementation roadmap. We use proven tools and techniques to automate time-intensive tasks and use industry-standard change management processes

Solutions design, development and implementation

At next stage we develop and implement the high-quality solutions. We follow industry best practices; rely on teamwork and effective knowledge management to ensure we deliver solutions on time and within budget.

Information management and security

Another characteristic that truly sets Netwin apart is our focus on security and transparency. This is crucial to our clients in industries that are data and document intensive – such as financial services and healthcare – where accuracy, privacy and security are top concerns. Our methodology ensures we

- Create and protect client's intellectual property rights
- Provide access to accurate information, analytics and knowledge sourcing
- Provide secured electronic connectivity designs and implementation
- Provide QA oversight

Resource management and lower Total Cost of Ownership (TCO)

This stage of our methodology ensures our resources are quickly scalable depending upon our clients' fluctuating needs. Our cost optimization framework ensures the lowest total cost of ownership and no hidden costs.

Customer Relationship Management (CRM)

This phase of our methodology is critical to success. It ensures the following key aspects:

- Strong governance and project management
- Joint accountability for overall success
- Executive commitment
- Transparency
- Transition manager to coordinate between the development team and our client's business stakeholders and manage expectations
- Strategic Development Group to remove the real and assumed risks of remote software development

Engagement Modules

Netwin has designed two Offshore Outsourcing Models keeping in mind the variety of the project requirements.

Fixed Price Model:

When you have fixed project requirements and the scope is very clear what is to be developed at the start of project this model is preferred. We will study your requirement documents in detail and prepare a detailed task list enlisting all milestones and deliverables. Each task is defined, so it becomes clear what will be final product. Along with the task sheet we will provide you our best offer and a time plan to execute it. After you approve the quote, we will work on the project and deliver you as per milestones defined. You can review the project as it is being developed; at every milestone we upload the project on your test server for your review. You can give your suggestions when it is being built. At the end of the project when final testing is done, we move it to production server to make it Live.

Time and Material Model (Dedicated Resources):

This model is useful when the project requirements are not freeze at the start of project. So the model is designed based on the resources utilized and the time spent for the project. In this model we provide you dedicated resources with monthly fee structure. The resources will work as per the schedule given by your project manager and will report to your project manager on daily basis. Your project manager will have direct control on all the resources, he can talk to resources online and can have online meetings. Our project manager will look after the resources whether they are maintaining proper schedule. Our technical manager will help the resources if they are stuck up in coding and also train resource for delivering good quality work. This model is good for application development, product development, product maintenance, feature enhancement type of work.
